LEARNING OUTCOMES BASED CURRICULUM FRAMEWORK FOR UNDERGRADUATE EDUCATION

1. Preamble

Chemistry plays a pivotal role in all aspects of physical & biological sciences, engineering, agriculture, medicine, and allied health disciplines. The knowledge of chemistry is essential for student to make the sustainable development and face the upcoming societal change. To impart the basic knowledge of science to young women community, the Department of Chemistry started B.Sc. Programme in the year 2017 followed by M.Sc. Chemistry Programme at 2020. The department offers Chemistry program with the aim of producing chemists with high professional competence, in carrying out both basic and applied chemistry research. The department has well equipped with the latest instruments required to carry out practical experiments in the laboratories and separate library with all needed books.

The faculty members have contributed research towards publication of several research papers in national and international conferences and peer reviewed journals. The research has been carried out in frontier areas of chemistry such as environmental chemistry, electrochemistry, nano materials, coordination chemistry, synthetic organic chemistry, photochemistry, polymer chemistry, and green chemistry. As extension activities, our faculty members and students visit remote villages and various industries in training them to develop entrepreneurial skills and competencies.

In the forthcoming academic year, B.Sc. & M.Sc. Chemistry syllabus provides an integrated and unified approach towards chemical sciences covering all branches of chemistry and following Choice Based Credit System with Outcome Based Education. The curriculum is rigorous in accord to international standards and covers theory and practical courses with full emphasis to construct intellectual assets. In the final semester, the PG students are encouraged to carry out research project in reputed research institutions to enhance their exposure level and placement abilities.

2. PROGRAMME OUTCOMES (PO)

Programme	B.Sc., Chemistry
Programme Code	24UCH
Duration	3 years [UG]
Programme Outcomes	PO1: Disciplinary Knowledge: Acquire knowledge in chemistry and apply the knowledge in their day-to-day life for betterment of self and society. PO2: Cognitive and Problem-Solving Skills: Develop critical, analytical thinking and problem-solving skills. PO3: Societal and Environmental Impact: Address and develop solutions for societal and environmental needs at local, regional, and national levels. PO4: Research-Related Skills: Develop research skills in defining problems, formulating and testing hypotheses, analyzing, interpreting, and drawing conclusions from data. PO5: Employability and Entrepreneurship: Enhance employability and entrepreneurship among students, along with ethical and communication skills. PO6: Self-Directed Learning: Work independently and engage in lifelong learning and continuous professional development. PO7: Moral and Ethical Awareness/Reasoning: Understand the importance of ethical behavior in professional contexts and be able to recognize and address ethical dilemmas. PO8: Lifelong Learning and Adaptability: Be prepared for lifelong learning and professional development, including the ability to adapt to changes in technology, business practices, and economic conditions.

3. PROGRAMME SPECIFIC OUTCOMES (PSO)

Programme Specific Outcomes:	PSO1: Placement: Apply principles of organic, inorganic, and physical chemistry to design and synthesize novel compounds, contributing to advancements in pharmaceuticals, materials science, and sustainable industries. PSO2: Research and Development: Develop expertise in Nano Science and Green Chemistry to design and implement sustainable, pollution-free technologies with high accuracy, fostering innovation in environmental protection, industrial applications, and entrepreneurship. PSO3: Contribution to the Society: Integrate practical expertise in compound analysis to ensure precision in quality control, research, and innovation, contributing to industrial growth and societal well-being.
-------------------------------------	--

4. Eligibility for Admission:

Candidates for admission to the first year of the Bachelor of Science Degree of Chemistry course shall be required to have passed the Higher Secondary Examination with Chemistry and Physics / Mathematics / Biology as main subjects by the Government of TamilNadu or any equivalent.

5. Methods of Evaluation and Assessments

Methods of Evaluation		
Internal Evaluation		25 Marks
External Evaluation	End Semester Examination	75 Marks
	Total	100 Marks
Methods of Assessment		
Recall (K1)	Simple definitions, MCQ, Recall steps, Concept definitions	
Understand / Comprehend (K2)	MCQ, True/False, Short essays, Concept explanations, short summary or overview	
Application (K3)	Suggest idea/concept with examples, suggest formulae, solve problems, Observe, Explain	
Analyze (K4)	Problem-solving questions, finish a procedure in many steps, Differentiate Between various ideas, Map knowledge	
Evaluate (K5)	Longer essay/Evaluation essay, Critique or justify with pros and cons	
Create (K6)	Check knowledge in specific or offbeat situations, Discussion, Debating or Presentations

L-Lecture T-Tutorial P-Practical S-Seminar C-Credit

Students must complete at least one online course (MOOC) from platforms like SWAYAM, NPTEL, or Naan Mudhalvan within the fifth semester. Additionally, engaging in a specified Self-learning Course is mandatory to qualify for the degree, and successful participation will be acknowledged with an extra credit of 2*.

1ST YEAR: FIRST SEMESTER

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHC11	Core Course 1 - General Chemistry – I	Core	3	1	2	0	5	6	25	75	100
Learning Objectives											
LO1	To understand the various atomic models and atomic structures.										
LO2	To correlate the wave particle duality of matter.										
LO3	To understand the periodic table, periodicity in properties and its applications.										
LO4	To correlate the nature of chemical bonding and chemical behaviour.										
LO5	To understand the fundamental concept of organic chemistry.										
Unit	Content										Hours
1	Atomic Structure and Periodic Trends: History of atom (J.J.Thomson, Rutherford); Moseley’s Experiment and Atomic number, Atomic Spectra; Electronic Configuration of Atoms and ions- Hund’s rule, Pauli’s exclusion principle and Aufbau principle; Black-Body Radiation and Planck’s quantum theory - Bohr's model of atom.										18
2	Introduction to Quantum Mechanics: Classical mechanics Wave mechanical model of atom, Postulates of quantum mechanics Formulation of Schrodinger wave equation -Probability and electron density, Atomic radii, Ionic and Covalent radii; ionization energy, electron affinity, electronegativity-electronegativity scales, applications of electronegativity.										18
3	Structure and Bonding - I: Born Haber cycle; polarisation Ion polarisation – polarising power and polarizability; Fajans’ rules - effects of polarization, Shapes of orbitals, overlap of orbitals – σ and π -bonds; hybridization; principles of VSEPR theory - Partial ionic character of covalent bond - dipole moment, application to molecules.										18

4	Structure and Bonding - II: VB theory – application to hydrogen molecule, limitations of VBT; MO theory - bonding, antibonding and non-bonding orbitals, bond order; comparison of VB and MO theories. Coordinate bond: Metallic bond VB Definition, conductors, insulator, semiconductor – types, applications of semiconductors - Vander Waals forces, Hydrogen bonding and its Types.	18
5	Basic Concepts in Organic Chemistry and Electronic Effects: Types of bond cleavage – heterolytic and homolytic types of reagents - electrophiles, nucleophiles, free radicals. Inductive effect - reactivity of alkyl halides, inductomeric and electromeric effects. Resonance – resonance energy, Types of organic reactions - addition, substitution, elimination reaction.	18

CO	Course Outcomes
CO1	Explain the atomic structure, wave particle duality of matter, periodic properties bonding, and properties of compounds.
CO2	Classify the elements in the periodic table, types of bonds, reaction intermediates electronic effects in organic compounds, types of reagents.
CO3	Apply the theories of atomic structure, bonding, to calculate energy of a spectral transition, Δx , Δp electronegativity, percentage ionic character and bond order
CO4	Evaluate the relationship existing between electronic configuration, bonding, geometry of molecules and reactions; structure reactivity and electronic effects
CO5	Construct MO diagrams, predict trends in periodic properties, assess the properties of elements, and explain hybridization in molecules and organic reaction mechanisms.

									CIA	External	Total
24UCHC12P	Core Course 2 - Quantitative Inorganic Estimation (Titrimetry) & Inorganic Preparation-I (Practical)	Core	0	0	4	0	3	4	25	75	100
Learning Objectives											
LO1	To understand laboratory safety and handling glasswares										
LO2	To understand volumetric estimations										
LO3	To correlate acid base titration and standard solutions										
LO4	To understand precipitation titration										
LO5	To understand the complexometric titrations using EDTA										
Unit	Content										Hours
1	Acidimetry: 1. Estimation of Borax – Standard Sodium Carbonate 2. Estimation of Sodium Hydroxide – Standard Sodium Carbonate 3. Estimation of HCl – Standard Oxalic acid										12
2	Complexometry: 1. Estimation of Magnesium using EDTA 2. Estimation of Zinc using EDTA										12
3	Dichrometry: 1. Estimation of Ferrous Iron using Diphenyl amine/N-Phenylanthranillic acid as indicator										12
4	Precipitation Titration: 1. Estimation of Chloride in neutral medium (Demonstration experiment).										12
5	Permanganometry: 1. Estimation of Ferrous Sulphate – Standard FAS 2. Estimation of Oxalic acid – Standard Oxalic acid										12

SCHEME OF VALUATION
24UCHC12P - QUANTITATIVE INORGANIC ESTIMATION (TITRIMETRY) &
INORGANIC PREPARATION-I (PRACTICAL)

Internal assessment: 25 Marks

External assessment: 75 marks

Total: 100 marks

Max. Marks: 75

Record: 15 Marks

Volumetric Analysis: 60 Marks

Volumetric Analysis : 60 Marks (Maximum)

Short Procedure : 10 Marks

Error upto 2 % : 50 Marks

2 to 3 % : 40 Marks

3 to 4 % : 30 Marks

4 to 5 % : 20 Marks

> 5 % : 10 Marks

Arithmetic error : Deduct 1 mark

Wrong calculation : Deduct 20 % of marks scored

No calculation : Deduct 40 % of marks scored

CO	Course Outcomes
CO1	Explain the basic principles involved in titrimetric analysis and inorganic preparations.
CO2	Compare the methodologies of different titrimetric analysis.
CO3	Estimate the amount of a substance present in a given solution.
CO4	Assess the yield of different inorganic preparations and identify the end point of various titrations.
CO5	Describe the measurable skills, abilities, knowledge in qualitative analysis.

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHA11	Allied / Generic - 1 Allied Chemistry	Allied	3	1	0	0	3	4	25	75	100
Learning Objectives											
LO1	To understand chemical bonding and nuclear chemistry.										
LO2	To know about the important materials used in industries.										
LO3	To understand the various fundamental concepts in organic chemistry.										
LO4	To correlate types of thermodynamics process.										
LO5	To understand separation and purification techniques.										
Unit	Content										Hours
1	Chemical Bonding and Nuclear Chemistry: Chemical Bonding: Molecular Orbital Theory-bonding, anti-bonding and non-bonding orbitals. Molecular orbital diagrams for Hydrogen, Helium, Nitrogen; discussion of bond order and magnetic properties. Nuclear Chemistry: Fundamental particles - Isotopes, Isobars, Isotones and Isomers.										12
2	Industrial Chemistry: Fuels: Fuel gases: Natural gas, water gas, semi water gas, carbureted water gas, producer gas, CNG, LPG and oil gas (manufacturing details not required). Silicones: Synthesis, properties and uses. Fertilizers: Urea, NPK fertilizer, superphosphate, triple superphosphate.										12
3	Fundamental Concepts in Organic Chemistry: Hybridization: Orbital overlap, hybridization and geometry of CH ₄ , C ₂ H ₄ and C ₆ H ₆ . Electronic effects: Inductive effect, electromeric effect, mesomeric effect, hyper conjugation and steric effects - examples. Reaction mechanisms: Types of reactions –										12

	aromaticity (Huckel's rule) – aromatic electrophilic substitution: nitration, halogenation, Friedel-Craft's alkylation and acylation.	
4	Thermodynamics and Phase Equilibria: Thermodynamics: Types of systems, reversible and irreversible processes, Statements of first law and second law of thermodynamics. Carnot's cycle and efficiency of heat engine. Entropy and its significance. Relationship between Gibbs free energy and entropy. Phase equilibria: Gibb's phase rule, terms involved.	12
5	Analytical Chemistry: Principles of volumetric analysis. Separation and purification techniques – extraction, distillation and crystallization. Chromatography: principle and application of column, paper and thin layer chromatography.	12

CO	Course Outcomes
CO1	Gain in-depth knowledge about the theories of chemical bonding, nuclear reactions and its applications.
CO2	Evaluate the efficiencies and uses of various fuels and fertilizers.
CO3	Explain the type of hybridization, electronic effect and mechanism involved in the organic reactions.
CO4	Apply various thermodynamic principles, systems and phase rule.
CO5	Explain various methods to identify an appropriate method for the separation of chemical components.
Textbooks:

1ST YEAR: FIRST SEMESTER

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHS11	SEC - 1 (NM) Foundation Course in Chemistry	NME	1	0	1	0	2	2	25	75	100
Learning Objectives											
LO1	To provide a broad foundation in chemistry that stresses scientific reasoning and analytical problem solving with a molecular perspective.										
LO2	To provide students with the skills required to succeed in graduate school, the chemical industry, or professional school.										
LO3	Students will demonstrate scientific understandings of the structure of matter and of its physical and chemical transformations.										
LO4	Students will apply appropriate theories to predict chemical structure, reactivity, and physical properties.										
LO5	Aim is long-term and provides overall direction, while objectives are short-term and measurable.										
Unit	Content									Hours	
1	Atomic properties & Periodic Properties: Mendeleev's periodic laws and table - modern periodic laws – Periodicity of property and magic numbers Size of atoms and (Atomic and ionic radii) - Metallic radii, Atomic radius, Van der Waals radius, Ionization energy, Isoelectronic species – Electronic affinity - Electronegativity (Pauling, Allred and Rochow's scale, Mulliken), Applications of electronegativity.									6	
2	Nomenclature & Hybridization: Covalent bond - Formation of sigma and pi bond, Differences between sigma and pi bond, Homolytic and heterolytic cleavage of covalent bond - Tetra valency of carbon. Hybridization sp, sp ² and sp ³ hybridizations.									6	

	IUPAC system of nomenclature of common organic compounds (upto C-10). Naming of organic compounds with one functional group - Halogen compounds, alcohols, phenol, aldehydes, ketones, carboxylic acids and its derivatives.	
3	Solutions & Thermodynamics: Mathematical concepts – Function of a real variable, differentiation – Derivative of a function, integration - Methods of integration; Concentration units – Normality, molarity, molality, mole ratio; oxidation number - Oxidation number calculation. Gaseous state - Gas law - Boyle's Law, Charles law, Avogadro hypothesis. Thermodynamics - Zeroth, first, second, third law - Terminology in thermodynamics	6
4	Data Analysis: Data analysis - Theory of errors - Idea of significant figures and it's importance with examples - Difference between precision and accuracy - Methods of expressing precision and accuracy. Error analysis - Methods of minimizing errors - Problems related to mean, median, standard deviation, confidence limit.	6
5	Chromatography: Chromatography - Introduction - Classification of chromatographic method - Paper Chromatography - Principle, theory, R _f values - TLC - Principle; Adsorption - Column and Ion exchange Chromatography - Principle, theory; comparison between partition and adsorption chromatography.	6

CO	Course Outcomes
CO1	Students at the end of the course will have acquired a good knowledge of the concepts of atoms and chemical bonds.
CO2	They will be able to understand and use the fundamental principles which characterize the properties of matter and how it reacts.
CO3	Students will gain an understanding of chemical reactions and strategies to balance them.
CO4	The relative quantities of reactants and products.
CO5	The fundamental properties of atoms, molecules, and the various states of matter.

									CIA	External	Total
24UCHS12	SEC-2 Chemistry Practical for Physical and Biological Sciences - I	SEC	0	0	2	0	2	2	25	75	100
Learning Objectives											
LO1	Demonstrate accurate use of volumetric glassware, including burettes, pipettes, and volumetric flasks.										
LO2	Differentiate between types of titrations (acid-base, redox, complexometric, and precipitation titrations).										
LO3	Prepare standard solutions and perform standardization procedures to determine the exact concentration of titrants.										
LO4	Calculate the concentration of analytes from titration data using appropriate formulas and stoichiometric relationships.										
LO5	Select suitable indicators for various types of titrations based on their pH range and the expected equivalence point.										
Unit	Content									Hours	
1	1. Estimation of sodium hydroxide using standard sodium carbonate 2. Estimation of sodium carbonate using standard sodium hydroxide									6	
2	3. Estimation of hydrochloric acid using standard oxalic acid 4. Estimation of ferrous sulphate using standard Mohr's salt									6	
3	5. Estimation of oxalic acid using standard ferrous sulphate 6. Estimation of potassium permanganate using standard sodium hydroxide									6	
4	7. Estimation of Ca (II) using EDTA solution 8. Estimation of Mg (II) using EDTA solution									6	
5	9. Estimation of total hardness of water 10. Estimation of ferrous ion using diphenyl amine as indicator									6	

SCHEME OF VALUATION
24UCHS12 - CHEMISTRY PRACTICAL FOR PHYSICAL AND
BIOLOGICAL SCIENCES - I
(For Biochemistry and ND (FSM) – I year/I Semester)

Internal assessment: 25 Marks

External assessment: 75 marks

Total: 100 marks

Max. Marks: 75

Record: 15 Marks

Volumetric Analysis: 60 Marks

Volumetric Analysis : 60 Marks (Maximum)

Short Procedure : 10 Marks

Error upto 2 % : 50 Marks

2 to 3 % : 40 Marks

3 to 4 % : 30 Marks

4 to 5 % : 20 Marks

> 5 % : 10 Marks

Arithmetic error : Deduct 1 mark

Wrong calculation : Deduct 20 % of marks scored

No calculation : Deduct 40 % of marks scored

CO	Course Outcomes
CO1	Gain an understanding of the use of standard flask and volumetric pipettes, burette.
CO2	Design, carry out, record and interpret the results of volumetric titration.
CO3	Apply their skill in the analysis of water/hardness.
CO4	Analyze the chemical constituents in allied chemical products.
CO5	Describe the measurable skills, abilities, knowledge in qualitative analysis.

1ST YEAR: FIRST SEMESTER

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHF11	Foundation Course - Food Chemistry	FC	1	1	0	0	2	2	2	75	100
Learning Objectives											
LO1	To understand the food adulteration and poisons.										
LO2	Relate the properties and structures of chemical components and ingredients to the functional and chemical properties of foods.										
LO3	To correlate food additives and preservation.										
LO4	To understand basic analysis of major and trace food components.										
LO5	To correlate physical and chemical interactions between food components and their impact on quality.										
Unit	Content										Hours
1	Food Adulteration: Sources of food, types, advantages and disadvantages. Food adulteration - contamination of wheat, rice, milk, butter etc. with clay stones, water and toxic chemicals - Common adulterants, Ghee adulterants and their detection. Detection of adulterated foods by simple analytical techniques.										6
2	Food Poison: Food poisons - natural poisons (alkaloids - nephrotoxin) - pesticides, (DDT, BHC, Malathion) - Chemical poisons - First aid for poison consumed victims. Materials for food packing - Limitations and advantages.										6
3	Food Additives: Food additives - artificial sweeteners – Saccharin - Cyclamate and Aspartate Food flavours -esters, aldehydes and heterocyclic compounds – Food colours Emulsifying agents – preservatives - leavening agents.										6
4	Beverages: Beverages - soft drinks - soda - fruit juices - alcoholic beverages - examples. Carbonation-addiction to alcohol – diseases of liver and social problem.										6
5	Edible Oils: Fats and oils - Sources of oils - production of refined vegetable oils - preservation. Saturated and unsaturated fats - iodine value - role of MUFA and PUFA in preventing heart diseases - determination of iodine value, RM value, saponification value and their significance.										6

CO	Course Outcomes
CO1	Learn about Food adulteration - Contamination of Wheat, Rice, Milk, Butter.
CO2	Get an awareness about food poisons like natural poisons (alkaloids - nephrotoxin) Pesticides, DDT, BHC and Malathion.
CO3	Get an exposure on food additives, artificial sweeteners, Saccharin, Cyclamate and Aspartate in the food industries.
CO4	Acquire knowledge on beverages, soft drinks, soda, fruit juices and alcoholic beverages examples.
CO5	Study about fats and oils - Sources of oils - production of refined vegetable oils - preservation. Saturated and unsaturated fats – MUFA and PUFA.

3 – Strong, 2- Medium, 1- Low

BRIDGE COURSE SYLLABUS 2024-2025

Course Objectives

- To understand basics of chemistry
- To develop working skills with qualitative and quantitative.
- To acquire basic knowledge in atomic structure, periodic tables, organic compounds.

Unit I: Atomic Structure

Structure of an atom, atomic number, atomic weight, stable and unstable atoms, molecules Atomic Orbitals, quantum, numbers – Azimuthal, magnetic and spin Quantum numbers and their significance. Pauli's exclusion principle, Hund's rule & Aufbau principle. Classification of s, p, d & f block elements.

Unit II: Periodic trends & Thermodynamics

Periodic table trends–Electron configuration, atomic radii, Ionization energy, Electronegativity, Electron affinity, Metallic characters. Thermodynamics- definition, types of thermodynamics laws and application of thermodynamics

Unit III: Principles Chemical Analysis

Definition - Molarity, normality and mole fraction-Types of titrimetric reactions acid - base, redox, precipitation and complex metric titrations, Indicators neutralization, redox, adsorption and metal ion indicators, Ionic bond or electrovalent bonds, covalent bonds, Vander Waals bond, Hydrogen bonds, a hydro bond– pH, Effect of change in pH-Buffer system.

Unit IV: Organic Compounds

Carbohydrates, Lipids, Proteins, and Nucleic acids components and its uses.

Unit V: Higher studies & Job opportunities

Bachelor of Education, Post Graduation, Specialized Post Graduation, and Recruitment for Chemistry graduates - Govt Jobs, Private Jobs.

1ST YEAR: SECOND SEMESTER

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHC21	Core Course 3 - General Chemistry –II	Core	3	1	2	0	5	6	25	75	100
Learning Objectives											
LO1	To understand the different definitions of acids and bases (Arrhenius, Bronsted-Lowry, Lewis), their properties, and their reactions.										
LO2	To calculate pH, pOH, and equilibrium concentrations of acids, bases, and their salts using the appropriate equations.										
LO3	To apply the principles of ionic equilibria, including solubility product, common ion effect, and hydrolysis of salts.										
LO4	To describe the properties and reactions of elements in the s- and p- blocks of the periodic table, including alkali metals, alkaline earth metals, and representative elements.										
LO5	To identify and name different types of hydrocarbons (alkanes, alkenes, alkynes, and aromatics), and understand their structures, properties, and reactions.										
Unit	Content									Hours	
1	Acids, bases and Ionic equilibria Concepts of Acids and Bases - Arrhenius concept, Bronsted-Lowry concept, Lewis concept; pH scale, pH of solutions; Degree of dissociation, common ion effect, factors affecting degree of dissociation; acid base indicators, theory of acid base indicators, Buffer solutions – types, mechanism of buffer action in acid and basic buffer, Henderson- Hasselbalch equation.									18	
2	Chemistry of s - Block Elements Hydrogen: Position of hydrogen in the periodic table. Alkali metals: Comparative study of the elements with respect to									18	

	oxides, hydroxides, halides, carbonates and bicarbonates. Diagonal relationship of Li with Mg. Anomalous behaviour of Be. Chemistry of p - Block Elements (Group 13 & 14) preparation and structure of diborane and borazine. Chemistry of borax. Extraction of Al and its uses. Alloys of Al. Comparison of carbon with silicon. Carbon-di-sulphide – Preparation, properties, structure and uses. Percarbonates, per monocarbonates and per dicarbonates.	
3	Chemistry of p- Block Elements (Group 15-18) General characteristics of elements of Group 15; chemistry of $\text{H}_2\text{N-NH}_2$, NH_2OH, NH_3 and HNO_3. Chemistry of PH_3, PCl_3, POCl_3, P_2O_5. General properties of elements of group 16 - Structure and allotropy of elements - chemistry of ozone - Classification and properties of oxides - oxides of sulphur SO_2, SO_3 – Oxy acids of sulphur (Caro's and Marshall's acids). Chemistry of Halogens: Group 17 General characteristics of halogen with reference to electro- negativity, electron affinity, oxidation states and oxidizing power. Halogen acids (HF, HCl, HBr and HI) Noble gases: Position in the periodic table. Preparation, properties and structure of XeF_2, XeF_4, XeF_6 and XeOF_4; uses of noble gases.	18
4	Hydrocarbon Chemistry-I Alkadienes: Nomenclature - classification – isolated, stability of conjugated dienes; mechanism of electrophilic addition to conjugated dienes - 1, 2 and 1, 4 additions; free radical addition to conjugated dienes – Diels-Alder reactions — polybutadiene, polyisoprene (natural rubber), vulcanisation, polychloroprene. Alkynes: Nomenclature, general methods of preparation, properties; acidic nature of terminal alkynes and acetylene.	18
5	Hydrocarbon Chemistry - II Benzene: Source, structure of benzene, stability of benzene ring, molecular orbital picture of benzene, aromaticity, Huckel's $(4n+2)$ rule and its applications. Electrophilic substitution reactions - General mechanism of aromatic electrophilic substitution - nitration, sulphonation, halogenation, Friedel-Craft's alkylation and acylation. Polynuclear Aromatic hydrocarbons: electrophilic substitution reaction, nitration, sulphonation, halogenation, Friedel – Crafts acylation & Diels-Alder reaction and Haworth synthesis.	18

CO	Course Outcomes
CO1	To explain the concept of acids, bases and ionic equilibria; periodic properties of s and p block elements, preparation and properties of aliphatic and aromatic hydrocarbons.
CO2	To discuss the periodic properties of sand p- block elements, reactions of aliphatic and aromatic hydrocarbons and strength of acids.
CO3	To classify hydrocarbons, types of reactions, acids and bases, examine the properties s and p-block elements, reaction mechanisms of aliphatic and aromatic hydrocarbons.
CO4	To explain theories of acids, bases and indicators, buffer action and important compounds of s-block elements.
CO5	To assess the application of hard and soft acids indicators, buffers, compounds of s and p- block elements and hydrocarbons.

1ST YEAR: SECOND SEMESTER

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHC22P	Core Course 4 - Qualitative Organic Analysis and Preparation of Organic Compounds - II (Practical)	Core	0	0	4	0	2	4	25	75	100
Learning Objectives											
LO1	To recall basic safety rules, symbols, and first-aid procedures in a chemistry laboratory.										
LO2	To perform qualitative organic analysis tests to identify functional groups in unknown compounds.										
LO3	To differentiate between aromatic and aliphatic compounds, as well as saturated and unsaturated compounds.										
LO4	To prepare derivatives of specific functional groups to confirm their presence in organic compounds.										
LO5	To prepare organic compounds through various synthetic methods, including nitration, halogenation, oxidation, and rearrangement reactions.										
Unit	Content									Hours	
1	Chemistry Lab Safety Safety rules, symbols and first-aid in chemistry laboratory. Basic ideas about Bunsen burner, its operation and parts of the flame. Chemistry laboratory glassware – basic information and uses.									4	
2, 3 & 4	Qualitative Organic Analysis a) Preliminary examination b) Detection of special elements - nitrogen, sulphur and halogens c) Aromatic and aliphatic nature d) Test for saturation and unsaturation e) Identification of functional groups f) Confirmation of functional groups - monocarboxylic acid, dicarboxylic acid - monohydric phenol, dihydric phenol - Aldehyde									40	

	• carbohydrate (reducing or non-reducing sugars) • Primary amine • monoamide, diamide	
5	Preparation of Organic Compounds (Any 3) - Bromination - 2,4,6 tribromo aniline from aniline - Bromination - p-bromo acetanilide from acetanilide - Oxidation - benzoic acid from Benzaldehyde - Preparation of Benzanilide from Aniline - Salicylic Acid from Methyl Salicylate - Preparation of Tribromo Phenol from Phenol - Preparation of Benzoic acid from Benzamide	16

SCHEME OF VALUATION
24UCHC22P - QUALITATIVE ORGANIC ANALYSIS AND
PREPARATION OF ORGANIC COMPOUNDS (PRACTICAL)

Internal assessment	: 25 Marks
External assessment	: 75 Marks
Total	: 100 Marks
Max. Marks	: 75 Marks
Record	: 10 Marks
Viva voce	: 5 Marks
Preparation	: 20 Marks (quantity: 10 & quality: 10)
Organic Analysis	: 40 Marks

Organic Analysis	: 40 Marks
Preliminary Test	: 10 Marks
Aliphatic or Aromatic	: 5 Marks
Saturated or Unsaturated	: 5 Marks
Tests for Special Elements	: 10 Marks
Functional group Tests	: 10 Marks

CO	Course Outcomes
CO1	To demonstrate a comprehensive understanding of laboratory safety practices, including the ability to identify and respond appropriately to potential hazards.
CO2	To accurately identify the functional groups present in unknown organic compounds using a variety of chemical tests.
CO3	To effectively differentiate between aromatic and aliphatic compounds, as well as saturated and unsaturated compounds.
CO4	To successfully prepare and analyze derivatives of specific functional groups to confirm their presence in organic compounds.
CO5	To successfully synthesize a variety of organic compounds using different reaction types, including nitration, halogenation, oxidation, and rearrangement reactions.

1ST YEAR: SECOND SEMESTER

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHA21	Elective Course - 2 Chemistry - II	Elective	3	1	0	0	4	4	25	75	100
Learning Objectives											
LO1	To understand the mechanisms of polymerisation and their impact on polymer properties.										
LO2	To analyze real-world problems and apply the fundamental principles of photochemical reactions to identify potential solutions.										
LO3	To apply the concepts of electrochemistry to analyze the behavior of batteries and fuel cells.										
LO4	To encompasses the core concepts of corrosion delves into the application of protective coatings, such as paints, enamels, and lacquers, to safeguard materials from corrosion.										
LO5	To assess various pharmaceutical drugs, including sulfa drugs, antibiotics, anesthetics, antiseptics, analgesics, antipyretics, tranquilizers, and sedatives.										
Unit	Content									Hours	
1	Polymer Chemistry - Introduction, classification of polymers, types of polymerisation, addition polymerization - mechanism of free radical polymerization, condensation and copolymerization. Thermoplastic and thermosetting polymers, difference between thermoplastic and thermosetting polymers, preparation, properties and uses of Polythene, PVC, Teflon, Nylon 6,6 and Polyesters.									12	
2	Photochemistry - Grothus-Draper's law and Stark-Einstein's law of photochemical equivalence, Quantum yield - Hydrogen-chloride reaction. Jablonskii diagram - Phosphorescence, fluorescence, chemiluminescence and photosensitization and photosynthesis (definition with examples).									12	

3	Electrochemistry - Electrolytes – Definition and Examples – Classification - Specific and Equivalent Conductance – Ostwald's Dilution Law and its Limitations. Batteries - primary and secondary batteries - difference between primary and secondary batteries. Lead storage battery - cell diagram, cell reaction and uses. Fuel cell H ₂ -O ₂ fuel cell - explanation with diagram.	12
4	Corrosion and Protective Coatings - Corrosion - types, corrosion control methods. Electrochemical corrosion and its prevention - Electroplating and Electroless plating - applications. Paints - Components of Paint – Requisites of a Good Paint - Pigments – Classification of Pigments based on Colour. Dyes – Definition – Classification based on Constitution and Application – Chromophores and Auxochromes. Enamels and Lacquers - composition and uses.	12
5	Pharmaceutical Chemistry - Sulpha Drugs – Preparation and uses of Sulphapyridine and Sulphadiazine - mode of action of Sulpha drugs - Antibiotics - Uses of Penicillin, Chloramphenicol and Streptomycin - Anaesthetics - General and Local Anaesthetics - Antiseptics - Analgesics, Antipyretics, Tranquilizers, Sedatives - Examples and their applications.	12

CO	Course Outcomes
CO1	Critically evaluate the properties and applications of different types of polymers to select the most suitable materials for specific purposes.
CO2	To explain the laws of photochemistry and calculate quantum yields.
CO3	Construct electrochemical cells, such as batteries and fuel cells, based on theoretical principles.
CO4	Ability to design and implement effective corrosion prevention strategies for various materials and environments.
CO5	Develop new pharmaceutical compounds with improved efficacy and reduced toxicity.

24UCHA22P	Elective Course - 3 Chemistry Practical for Physical and Biological Sciences - II	Elective	0	0	2	0	2	2	25	75	100
Learning Objectives											
LO1	To understand different types of organic compounds with respect to their properties.										
LO2	To determine the various elements in organic compounds.										
LO3	To identify the various organic functional groups.										
LO4	To find the components and structure of an unknown organic molecule.										
LO5	To solve problems related to the identification of organic molecules through a series of tests and observations.										
Unit	Content									Hours	
1	Systematic Analysis of Organic Compounds The analysis must be carried out as follows: (a) Preliminary Tests (b) To distinguish between aliphatic and aromatic compounds.									6	
2	To distinguish – Saturated and unsaturated compounds.									6	
3	Detection of special elements (N, S, Halogens).									6	
4	Identification of Functional group tests (Absence of special elements) Phenol, Acids (mono & di), Aldehyde and Carbohydrate									6	
5	Identification of Functional group tests (Presence of special elements) Presence aromatic primary amine, Amides (mono & di).									6	

SCHEME OF VALUATION
24UCHA22P - CHEMISTRY PRACTICAL FOR PHYSICAL AND
BIOLOGICAL SCIENCES - II
(For Biochemistry and ND (FSM) – I year/II Semester)

Internal assessment	: 25 Marks
External assessment	: 75 Marks
Total	: 100 Marks
Max. Marks	: 75 Marks
Record	: 10 Marks
Viva voce	: 5 Marks
Organic Analysis	: 60 Marks

Organic Analysis	: 60 Marks
Preliminary Test	: 10 Marks
Aliphatic or Aromatic	: 5 Marks
Saturated or Unsaturated	: 5 Marks
Tests for Special Elements	: 10 Marks
Confirmation Tests	: 15 Marks
Functional groups Tests	: 15 Marks

CO	Course Outcomes
CO1	To gain an understanding of the use of standard flask and volumetric pipettes, burette.
CO2	To design, carry out, record and interpret the results of volumetric titration.
CO3	To apply their skill in the analysis of water/hardness.
CO4	To analyze the chemical constituents in allied chemical products.
CO5	To describe the measurable skills, abilities, knowledge in qualitative analysis.

1ST YEAR: SECOND SEMESTER

Course Code	Course Name	Category	L	T	P	S	Credits	Hours	Marks		
									CIA	External	Total
24UCHS21	SEC-3 Diary Chemistry	SEC	1	0	1	0	2	2	25	75	100
Learning Objectives											
LO1	To understand about the physical properties of milk.										
LO2	To describe the steps involved in pasteurization processes.										
LO3	To identify common adulterants in ghee and explain the causes and prevention of rancidity.										
LO4	To analyze the manufacturing processes for reconstituted milk and condensed milk.										
LO5	To assess the health benefits and potential applications of fermented milk products.										
Unit	Content										Hours
1	Composition of Milk: Milk - general composition of milk - constituents of milk - lipids, proteins, carbohydrates, vitamins and minerals - physical properties of milk - colour, odour, acidity - Factors affecting the composition of milk - Adulterants, preservatives with neutralizer - examples. Estimation of fat.										6
2	Processing of Milk: Microbiology of milk - destruction of micro - organisms in milk - physico - chemical changes taking place in milk due to processing - boiling, pasteurization - types of pasteurization - Bottle, Batch and HTST (High Temperature Short Time) - Vacuum pasteurization - Ultra High Temperature Pasteurization.										6
3	Fermentation and Preservation of Milk Products: Fermentation of milk - cultured milk - butter milk - bulgarious milk - acidophilous milk - Yogurt indigenous products - Khoa and Chhena - Ice cream - stabilizers - milk powder - milk preservation techniques - milk spoilage, traditional preservation methods, chemical preservatives and biological preservatives.										6
4	Dairy Products and their Packaging: Cream - gravitational and centrifugal methods of separation of cream - estimation of fat in cream. Butter - desi butter - salted butter, estimation of acidity and moisture content in butter. Ghee - rancidity - antioxidants and synergists. Packaging materials for dairy products - packaging materials, functions and design considerations.										6
5	Specialized Milk Products: Standardised milk - reconstituted milk - flow diagram of manufacture - Homogenized milk - flavoured milk - vitaminised milk - toned milk - Incitation milk - Vegetable toned milk - humanized milk - condensed milk.										6

CO	Course Outcomes
CO1	To understand about general composition of milk – constituents and its physical properties.
CO2	To acquire knowledge about pasteurization of Milk and various types of pasteurization - Bottle, Batch and HTST Ultra High Temperature Pasteurization.
CO3	To learn about Cream and Butter their composition and how to estimate fat in cream and Ghee
CO4	To explain about Homogenized milk, flavoured milk, vitaminised milk and toned milk
CO5	To have an idea about how to make milk powder and its drying process - types of drying process

3 – Strong, 2- Medium, 1- Low

Continuous Internal Assessment (CIA) Test

The following procedure will be followed for the award of internal marks:

CIA Exam I: Three hours duration for 75 marks (First 2 ½ Units)

CIA Exam II cum Model Exam: Three hours duration for 75 marks (Full Syllabus)

Internal Mark Distribution	Theory & Practical
CIA – I (75 Marks)	5
CIA – II (75 Marks)	5
Library Usage in Hours	5
Attendance	5
Assignment / Seminar / Observation	5
Internal Marks	25

Format to Entering in all Continue Internal Assessment (CIA) Tests and Internal Marks

Reg . No.	Name	CIA - 1	CIA - 2	Marks Conve rsion	Library Usages	Atten dance	Assignment / Seminar / Observation	Total Marks	Remarks

Recommendations for Entering Library Usage:

Library usage for UG in hours	Marks to be awarded
Minimum 10 Hours	5

Attendance:

Attendance Earned	Category	Marks to be Awarded
91% and above	Highly Regular	5
75% but below 90%	Regular	4
65% but below 74%	Shortage	3
55% but below 64%	Detained	2
Below 54%	Redo	0

THEORY QUESTION PAPER PATTERN END SEMESTER EXAMINATIONS FOR UG & PG DEGREE PROGRAMMES - 3 HOURS DURATION

Part A	To answer All the 10 Short Questions (Two Questions from each UNIT)	10 X 2 = 20 Marks
Part B	To answer All the 5 questions (either or, type) (One Question from each UNIT)	5 X 5 = 25 Marks
Part C	To answer 3 questions (out of 5 questions) (One question from each UNIT)	3 X 10 = 30 Marks
TOTAL		75 Marks
(Equal Weightage should be given to each unit)
