## About the FDP

### Vision

To create expertise in scientific learning course design practices in faculty members, for achieving excellence in world class curricula design.

### Purpose

Faculty members seldom are aware and updated on the latest scientific theoretical advancements and practices in educational course design principles. Hence, they find it difficult to create meaningful ways to design courses for higher education in the disciplines of arts, humanities, and sciences. With limited knowledge on course analysis, design, delivery, assessment and evaluation, it has become difficult for the teaching faculty members to complete syllabus in time. There is also no clue as to how learning progresses in individual students. All these reasons create disinterest among faculty members in their profession. Hence it becomes the need of the hour to empower our higher education professionals, who are involved in curricula design, with hands-on training in scientific curricula-design practices. This FDP handholds them in a systemic disciplined process

### Objectives

At the end of this Programe,  
participants would be able to:

- § Use International Curricula Standards
- § Use learning theories in course design
- § Design courses for skill learning
- § Design learning outcomes
- § Create assessment and evaluation.
- § Generate plans for implementation

### Methodology

This hands-on FDP uses problem based & experiential modes of learning. Participants would experience high introspection of understanding on learning curricula & course design.

### Highlights

To facilitate NEP, CDIO, AOL, LOCF and TPACK curricula design standards.

- § Provides holistic picture of education & research by deriving concepts, theory and practices from Arts, Mathematics, Sciences; Psychology Philosophy in addition to Technology, Engineering and Management.
- § Develops insights into adult learning Andragogy & its components.
- § Challenges cultural myths prevailing in curricula design, teaching-learning, assessments, evaluation, outcomes and derives scientific evidence towards awareness for improvement.
- § Conceptualize and practice discipline using active learning strategies.
